ABSTRACT

The invention relates to a method and a system for access by a client to services provided by a service provider, the client being able to transmit and/or receive information in a point-to-- point session with a session concentrator via a telecommunication network, in which an access control protocol is used to control access to the services provided by the service provider, and in which it is determined whether or not the client conforms to the access control protocol, the non-conforming client is authorised to access a network for non-conforming clients, a point-to-point session is established between the client and the session concentrator, and the session concentrator transfers the information transmitted by the client to a network for clients that conform to the access control protocol.
